
Data Editor Review:

Thank you for the requests and suggestions!

One of our data editors has reviewed your initial manuscript submission and has the following suggestion(s) to help improve the data, software citation and/or overall content. Please treat this as you would a reviewer's comments and respond accordingly in your report to the science editor. Questions can be sent directly to the data editors at data-editors@aes.org.

Thanks for the MRT versions of Tables 6 and 10. Please confirm that Table 10 (and maybe Table 6) will be shortened to show only a few lines of the tables with the full versions available in the MRT format online.

- **In this submission, we shorten those tables to a few lines, and adjust the table captions accordingly**

I am wondering if the data generated and displayed in this article is fully available. In particular there might be value to the community for reuse or reproducibility to share the reduced spectra shown in Figure 2. To publish these data in the Journal, please follow our Data Guide [1], upload one ZIP file of data files, per figure, and include in each ZIP a ReadMe describing the individual data files.

- **Thank you—we planned to publish all the data files as well as the code used to produce each figure, in a GitHub repository, but forgot to make mention of this in the first draft. We now make mention of this in the paper under the Data Availability Section, with a link. The repository will include the Figure 2 data, but we also upload a ZIP file containing all the spectra displayed in Figure 2.**
